

Asmit Sharma

Cybersecurity | Cloud security | Web & Network security | VAPT | Penetration Tester | SOC
Ajmer, India | +91 8890626388 | asmitsharma674@gmail.com | <https://chrys3s.github.io/>

Profile

Security enthusiast with B.Tech and MSc in Cyber Security, focused on application security, network security, and secure software development. Hands-on with web and network pentesting using Burp Suite, Nmap, Metasploit, Kali Linux, OWASP Top 10, and log analysis for threat detection. Experienced building secure web apps (Flask, ReactJS), encryption-based tools, and log-analysis utilities for structured insight extraction. Actively seeking roles as Security Engineer / Application Security Engineer / SOC Analyst (Fresher) in Bangalore, Pune, NCR, Mumbai.

Education

Sep 2022 – Sep 2023	M.Sc., Newcastle University Major - Cyber Security	Newcastle upon Tyne
Aug 2018 – May 2022	B. Tech., University of Petroleum and Energy Studies Graduated with Honors with specialization in Cyber Security & Forensics.	Dehradun

Personal Projects

Apr 2023 – Aug 2023	M-Stego Implemented and compared video steganography algorithms with custom encryption, focusing on secure data hiding. Used Python, cryptography, file handling, and security testing techniques to evaluate robustness against detection.
Jan 2023 – Mar 2023	A Bluetooth secure chat system with end-to-end encryption (BlueVault) Built end-to-end encrypted Bluetooth chat application using Diffie-Hellman key exchange for authentication and Double Ratchet algorithm for message confidentiality and forward secrecy, focusing on secure communication protocol design.
Jan 2022 – Apr 2022	Philomath Developed a Streamlit-based web UI to compare time-series prediction models using TensorFlow dense and recurrent neural networks, focusing on data preprocessing, visualization, and model performance analysis.
Aug 2021 – Dec 2021	Kalam - An interactive web development learning platform Built a full-stack interactive web development learning platform using ReactJS (frontend) and Python/Flask APIs, implementing authentication, authorization, and secure data handling best practices.
Jan 2021 – May 2021	Steganography using custom encryption algorithms A terminal UI application using Python for securing information through the hybrid implementation of steganography and encryption using a custom-designed encryption algorithm.
Aug 2020 – Dec 2020	Log Analysis using regular expressions and pattern matching algorithms Developed a terminal UI tool for log parsing, management, and analysis using regular expressions and pattern matching, converting unstructured logs into structured formats (CSV) for further security analytics and SIEM-like workflows.

Professional Experience

Jun 2021 – Aug 2021 **Intern, Pheme Software Pvt. Ltd.**
Implemented user authentication and IAM, created REST APIs in Flask, and contributed to ReactJS-based frontend with focus on secure web application development and access control.

Certificates

- IBM Cybersecurity Analyst Professional Certificate
- Preparing for Google Cloud Certification: Cloud Security Engineer
- AWS Fundamentals Specialization
- Python for Everybody
- The Bits and Bytes of Computer Networking

Skills

Security: Cyber Security, Application Security, Web Application Security, Network Security, Penetration Testing, Vulnerability Assessment, OWASP Top 10, Secure Coding, Log Analysis, SIEM
Tools: Kali Linux, Burp Suite, Nmap, Metasploit, OWASP ZAP, Wireshark, Sqlmap, Netcat, Nessus
Programming: Python, JavaScript
Platforms: Linux, Windows

Achievements

- **Springer: A systematic approach for analysing log files using string matching and regular expressions** – Focused on systematic log file analysis, preprocessing, and structuring for security monitoring and incident investigation.
- **International Conference on Cyber Security and Digital Forensics 2021 (ICCSDF 2021)** – Paper presentation event held by Springer to publish papers in the book series “Lecture notes on Data Engineering and Communications Technologies”.
